

MODULAR SWINGING BIN STORAGE SYSTEM

ABSTRACT

The invention is a swinging bin storage system. The system has a cabinet with an open front, with an upper
5 track and a lower track adjacent to its open front, and bins located within the cabinet portion. Each bin has a pivot that permit the bin to laterally slide in the upper track and lower track and pivot out of the cabinet when a user wishes to open the cabinet, and a handle on a front
10 wall of the bin, which handle activates a catch which is adapted to releasably slide within one of the upper and lower tracks of the cabinet.
